## BARLEY PRODUCTION REPORT

Production is forecast at 140 million bushels, down 2 percent from the July 1 forecast and down 30 percent from 2016. Based on conditions as of August 1, the average yield for the United States is forecast at 72.1 bushels per acre, down 1.4 bushels from the previous forecast and down 5.8 bushels from last year. Area harvested for grain or seed, at 1.95 million acres, is unchanged from the previous forecast but down 24 percent from 2016. When compared with last year, the largest yield decreases are expected in Montana and Washington due to dry conditions. Record high barley yields are expected in California and Colorado.

By July 23, ninety-seven percent of the Nation's barley crop was headed, equal to both last year and the 5-year average. Six percent of the barley crop was harvested by July 30, four percentage points behind last year and 3 percentage points behind the 5-year average. Overall, 49 percent of the barley was reported in good to excellent condition on July 30, down 3 percentage points from July 2 and 23 percentage points below the same time last year. Drought conditions have led to deteriorating barley conditions in the upper Missouri Valley, including North Dakota rated at 29 percent in the very poor to poor categories.

## 2017 BARLEY PRODUCTION

STATE	Seeded		Harvested		Yield		Production		
	2016	2017	2016	2017	2016	2017	2015	2016	2017
	------(000s acres)-----				(bu/acre)		------(000s bushels)-----		
Arizona	16	20	15	19	128	125	1,920	1,920	2,375
