

Typical analysis and product description

Premium Pot Still Malt

Typical analysis

Parameter	IoB	EBC	ASBC
Moisture	4.5% max	4.5% min	4.5% max
Extract	310.5 L°/kg	82.0%	82.0%
	77.0% as is		
Predicted Spirit Yield	410 LAA/t		
TN/TP	max 1.55%	max 9.7%	max 9.7%
SNR/KI/ST ratio	35-42	40-47	40-47
Friability	90% min	90% min	90% min

Standard packaging options

Whole grain	Bulk
	1000 kg bag
	500 kg bag
	25 kg sack
Crushed	25 kg sack

The best malt whiskies are distilled from the best quality pot still malt. Crisp Malting Group selects low protein 2-row spring distilling barleys to produce premium pot still malt. These barleys deliver the high level of extract and fermentability which combine to provide the optimum level of potential spirit yield.

Careful control of steeping and germination provide the correct balance of protein and cell wall modification and gentle kilning maintains the high level of enzyme activity required for excellent fermentability.
