

# PREMIUM® RESVERATROLO SG

GRANULATED TANNIN-BASED PRODUCT FOR OENOLOGICAL USE

## COMPOSITION

Granulated product, the result of a mix of condensed tannins extracted from high quality vegetal raw materials which make this product particularly fit for oenological use.

## CHARACTERISTICS

PREMIUM® RESVERATROLO SG is the result of a careful and plurennial selection of vegetal raw materials, which are all very interesting for their procyanidinic and catechinic composition. The innovative aspect of PREMIUM® RESVERATROLO SG is its composition which includes a tannin extracted from *Vitis vinifera* leaves (red berry): our initial intuition was later confirmed by the scientific world which for some time has been indicating the vine leaves as a very interesting raw material due to the presence of resveratrol, a well known compound with antiradical and antioxidant properties.

We were particularly careful to balance both the organoleptic aspects and the activities it performs in the wine: PREMIUM® RESVERATROLO SG provides to the wine a long preservation as well as a very good resistance to oxidation. Wines treated with this product result aromatically more complex, fresh and with more body. Moreover PREMIUM® RESVERATROLO SG has a quite good reactivity to proteins.

Through the exclusive production called "instantaneization", while preserving its delicate organoleptic characteristics, PREMIUM® RESVERATROLO SG also acquires the property to be highly soluble even in cold water.

## USE

PREMIUM® RESVERATROLO SG is particularly suitable for the treatment of red and white wines, vinegars and distillates.

In case of must and wines it's used since the pressing and then in the following processes, during both refinement and finishing. Its antioxidant action guaranteeing the redox stability, allows to reduce the quantity of sulphurous anhydride in the different phases of wine production.

It has a clarifying effect.

To use PREMIUM® RESVERATROLO SG follow the norms existing on the matter.

## INSTRUCTIONS FOR USE

PREMIUM® RESVERATROLO SG is easily soluble in the water. Dissolve carefully the necessary quantity of PREMIUM® RESVERATROLO SG in 10 parts of water, and then add it to the mass. Do not use metal objects nor hard water. It is advisable to use it a few days before filtration to better control the formation of tanno-proteic complexes.

During the final pre-bottling phases, it is advisable to dose the product on a wine which is stable from the protein point of view (to do this evaluation, the already internationally-awarded PROTEOTEST is advised).

## DOSAGE

From 5 to 20 g/hL in vinification, from 1 to 5 g/hL during the refinement up to the pre-bottling phases in the production of the red wines;

from 3 to 8 g/hL for the production of rosé wines;

from 1 to 5 g/hL for the production of white wines.

## PACKAGES

Poly laminated bags of 0.5 kg re-closeable through **zip system**.

## STORAGE

Store in a cool, dry place, sheltered from the light. Re-close carefully the open bags.

## DANGER

According to the Ministerial Decree approved on 28/01/1992, the product is classified as: NOT HAZARDOUS.

TECHNICAL DATASHEET: 19/08/2008

Questa documentazione integra la scheda di sicurezza senza sostituirla  
Eventuali modifiche potranno essere apportate senza alcun preavviso
