

Green Bullet

New Zealand

Origin: New Zealand. A high-alpha hop bred from open cross-pollination of Smoothcone, Green Bullet was first released in 1972. As with many New Zealand varieties, it possesses a level of aromatic oils unusual for high-alpha varieties bred in this era.

Usage: While Green Bullet was originally bred for bittering power, its pleasingly mellow and resinous oil profile lends itself well to late additions in English ale styles. It is regarded as a “workhorse” in its native New Zealand and is widely used there.

Aroma & Flavor Characteristics: Moderately intense with a distinct floral, resinous character reminiscent of Styrian Goldings, layered with hints of musky Southern Hemisphere fruit.

Maturity: Late

Yield: Moderate to good

Alpha Acid Range %	11.0 - 14.0
Beta Acid Range %	6.5 - 7.0
Co-Humulone as % of alpha	38 - 43
Total oils mL/100 gr.	1.0 - 1.4
