

SUPERFOOD®

Composition and appearance:

- Ingredients: Fully autolysed yeast products, DAP (32.5%), vitamins
- Light tan, hygroscopic powder with a somewhat yeasty aroma

Purpose:

- Complex nutrient for yeast fermentation
- Helps prevent stuck or sluggish fermentations
- Promotes yeast growth, viability, and long-term survival
- Increases alcohol tolerance of yeast
- Helps prevent H₂S and volatile acidity formation during fermentation
- Promotes more complete utilization of nutrients
- Improves aromas and flavors by balancing amino acid usage

Typical Dosage Rate:

- 300-600 ppm (2.5-5 lb/1000 gallons), providing 11 ppm available nitrogen in 120 ppm (1 lb/1000G)
- Higher doses for mead and some fruit wines
- Dose depends on must nitrogen content, see charts in BSG catalog
- Legal limit 7 lb/1000G
- IMPORTANT: Nitrogen-deficient musts require EXTRA DAP plus Superfood

Preparation and use:

- See BSG website for addition charts and more complete information
- Stir into water or juice before adding, or stir directly into juice.
- Break total dose into portions, add in stages:
 - Stage 1: At yeast inoculation if juice YAN is 150 ppm or less
 - Stage 2: During first half of fermentation
 - Stage 3: At or just after mid-fermentation
- For uninoculated fermentations, begin adding nutrients when *Saccharomyces* yeasts are growing (examine under microscope or wait for a clean, yeasty-smelling fermentation to begin).

General Points:

- *Contains DAP and other ingredients not permitted for organic wine*

Shelf Life and Stability:

- Store tightly closed at cool room temperature (20 C/68 F or below) in a dry place.
- Hygroscopic, will form lumps if exposed to air.
- Discard if lumps form that cannot be broken easily into powder, or if an unpleasant aroma develops
- Can be used for 2-3 years if it is still in powder form and retains a clean, yeasty aroma.
- Shelf life may be reduced if stored at a warmer temperature and/or in humid conditions, or if stored in contact with air.

SUPERFOOD®

Safety Information:

- Skin and eye irritant; wear eye protection, dust mask, and coat

GMO STATEMENT: To the best of our knowledge and the knowledge of the supplier or manufacturer of the ingredients, no GMO's are used in the preparation or manufacture of any of our nutrient products.
